Left Wing Lock, Inc. Announces Introduction of Line Production Tool

CHEVY CHASE, MD. - January 24, 2013 - Left Wing Lock, Inc., the leading provider of fantasy hockey lineup data, announced today that a new fantasy hockey tool will be available to users of the [leftwinglock.com](http://www.leftwinglock.com) website. The new tool, an NHL line production tool, will allow hockey fans to see at a glance which NHL lines are producing the most goals.

While the tool was developed primarily with fantasy hockey managers in mind, it is expected that hockey fans and members of the media will be active users. “The addition of a line production feature was the next logical step,” said site co-owner Patrick McLaughlin.

Mike McLaughlin, co-owner of the site and lead developer, was especially excited about the release. “As a fantasy hockey manager myself, line production data with this level of detail and accuracy simply didn’t exist. I want to win my fantasy leagues and I want my readers to win as well. This tool gives you that edge.”

The new tool can be found at <http://www.leftwinglock.com/line-production/> and will be available free of charge to all site visitors beginning immediately.
